

BRAINPORT BELIEFS

WE BELIEVE THAT STUDENTS OUTSMARTING THEIR TEACHER IS A TEACHER'S GREATEST COMPLIMENT.

Brainport Eindhoven, the most innovative technology region in Europe, where the smartest minds and highly skilled workers interact.

Through collaboration and innovation, they make our futures better, safer and cleaner. Collaborations that get results: more new ideas are created here every day than in any other place on earth. There is nothing quite like the brilliance of the thinkers and doers who work together in Brainport Eindhoven. Together, we invent and make complex machines and innovative products, improving the world we live in. So, it will come as no surprise that this region is known as the most innovative in the world.

We believe this is a place where it is understood that helping each other accelerates progress. Where we make

no distinction between big and small. Where a multinational is interested in a start-up and vice versa. Where we share a passion for realising ambition through innovation.

These innovations are born of our high-quality education. Where lecturers don't dictate but accept challenges and inspiration from their students. Where everyone is open to learning from each other. Both in the classroom and beyond; in close co-creation with the professional field. Brainport Eindhoven is unconventional. We help each other to discover, grow and develop, while at the same time achieving the impossible. Because we believe the best studying environment flourishes when it interacts and collaborates with a high-tech ecosystem. **That's Brainport Eindhoven.**
